

Emotional Intelligence, Personality and Techno-Pedagogical Competency in Secondary Level Teachers of Government and Private Schools: A Comparative Study

A Synopsis Submitted to
Lucknow University
of the Requirements for the Degree of
DOCTOR OF PHILOSOPHY (Ph.D.) IN EDUCATION

Supervisor

Dr. Mohammad Imran

Assistant Professor
A.N.D. Teacher's Training (PG) College

Researcher

Md Sariful Hoque

Enrollment No: 21610130
Department of Education

Department of Education

University of Lucknow

Lucknow, Uttar Pradesh

(2021-2022)

INTRODUCTION

In the bustling stairs of education, where chalk dust dances with the promise of knowledge, a quiet symphony takes place between instructors' hearts and their students' minds. Emotional Intelligence is the maestro, directing educators through the highs and lows of classroom interactions, while the subtle melodies of personality traits develop their pedagogical competencies. Educational landscapes evolve rapidly, and understanding how educators navigate the intricate dynamics of emotional intelligence, the personality dispositions, and adeptness in leveraging technological tools for pedagogical efficacy becomes paramount. This comparative study aims to delve into the nuanced interplay between these variables, shedding light on potential differences between teachers from government and private school sectors. Emotional intelligence, encompassing the ability to perceive, understand, and manage emotions effectively, stands as a cornerstone in fostering conducive learning environments and facilitating meaningful teacher-student interactions. Moreover, personality traits, which delineate enduring patterns of thoughts, feelings, and behaviors, significantly influence how teachers engage with their students, design instructional strategies, and adapt to the ever-changing demands of the educational landscape. In tandem with these psychological constructs, the integration of techno-pedagogical competencies emerges as a fundamental dimension in contemporary teaching paradigms, where educators harness digital platforms, educational software, and multimedia resources to enhance student engagement and learning outcomes. By examining the confluence of emotional intelligence, personality traits, and techno-pedagogical competencies, this research seeks to unravel potential variations between government and private school teachers, thereby offering valuable insights into the multifaceted dimensions of teacher effectiveness and professional development. In elucidating the intricate dynamics that underpin effective teaching practices across different educational settings, this study endeavors to inform policy-making endeavors, educational interventions, and professional development initiatives tailored to augment teacher competencies and foster holistic educational experiences for secondary level students in diverse socio-cultural contexts. Through a comprehensive synthesis of empirical literature, theoretical frameworks, and methodological approaches, this research endeavors to contribute to the burgeoning discourse on teacher effectiveness, emotional intelligence, and technology integration within the realm of secondary education, thereby enriching scholarly understanding and informing evidence-based practices aimed at nurturing the next generation of adept and empathetic educators.

REVIEW OF RELETED LITERATURE

The term "reviews of related literature" is composed of two words - "Re" and "View". "Re" means to do something again and again, while "View" means to see, perceive or look. Therefore, we can say that "reviews" mean to perceive or examine facts or phenomena repeatedly, to discover new and innovative research problems and to give new direction to effective research works. Reviews also help researchers to study from new perspectives and eliminate unnecessary duplicates from previous research studies.

Definition of the review of related literature

Good (1959) suggests that reading extensively and critically is the key to unlocking the vast house of published literature. This can help in identifying significant problems, developing explanatory hypotheses, and providing helpful orientation for defining the problem and selecting the appropriate procedures. Reading widely can also provide comparative data for interpreting results. According to Good, to be creative and original, it is important to read extensively and critically as a stimulus to thinking.

According to Lakes' Kaul (1984), the review of related literature is an essential step for any researcher as it helps them understand the research methodology that will be used in the study. This includes the tools and instruments that have been proven to be useful in previous studies, as well as the statistical methods that will establish the validity of the results.

Objectives of the review of related literature:

The review of related literature is an essential and significant aspect of a research process. A systematic review of related literature can help the researcher in the following ways. It can: -

- a) It can prevent unnecessary duplication from the previous study.
- b) Reviews can help the researcher select objectives, hypotheses, methodology and overall strategies.
- c) Reviews can help the researcher to find out the research gap from the study and according to that gap researcher will conduct the study.
- d) Previous research reviews also help researcher to get data and according to that data researcher also formed hypothesis.

Studied related to Emotional Intelligence:

K.K. Nithiya (2018) conducted a study on Emotional intelligence, Level of Aspiration and Level of achievement of higher secondary school students. The main objective of the study was To find out the level of Emotional Intelligence of higher secondary school students. To find out the Level of Aspiration of higher secondary school students. To find out the Level of Achievement in Chemistry of higher secondary school students. The investigator employed descriptive methods using the survey as a technique for the study. The investigator used a simple stratified random sampling technique to select 1498 XI standard students. The investigator finds significant differences between each variable of the study.

M. Leo David (2017) investigated that there is a significant relationship between Academic Achievement, on one side and Emotional Intelligence, Psychoticism, Neuroticism, Extraversion, Lie Scale, and All Categories of Select Variables as a combined whole on the other side among the teacher trainees of Tiruchirappalli district.

Anita Devi (2014) studied Emotional Intelligence, Academic Anxiety and Academic Achievement of High School Students about their Styles of Learning and Thinking and Certain Demographic Variables. The major objective to study the emotional intelligence level of high school students. To study the academic anxiety level of high school students. To study the academic achievement level of high school students. A descriptive survey method was employed for conducting the present investigation. The findings of the study revealed that about one-half (47.74%) of high school students had moderate emotional intelligence levels and 44.64% of students possessed low emotional intelligence levels.

Preeti Bhadouria (2014) investigated Personality and Emotional Intelligence and Its Effect on Academic Achievement of High School Students. The Sample size of the study is 500 students. Findings of the study there is no significant difference in the emotional intelligence of govt. high school male and female students. There is no significant difference in the emotional intelligence of males and females from private high school students.

Sanju Lata (2012) conducted a study on secondary school teachers' effectiveness in emotional intelligence, competency, and creativity. The major purpose of the study was to identify essential teacher competencies for teacher effectiveness and find out classroom practices used by teachers. A mixed-method approach was adopted to study this research on teacher effectiveness. Lottery system sampling technique was used for sampling, 400

teachers and 800 students were involved in this research. Major findings of the study indicated that most of the teachers are aware of his/her duty in their classrooms. Also, the majority of the teachers are not using evaluation techniques properly.

Manjappa k. Sulaghanni Studied research on emotional intelligence, school adjustment and study habits of secondary school students about their academic achievement in Social Science and found that the student's Emotional intelligence has made positive and significant effect on Academic achievement in social science.

Studied related to Personality:

M.S Rahman (2023) studied and focused on the extent of the relationship and effect of certain variables (emotional intelligence, parent-child relationship and personal values) on the career preference of Madrasah and Secondary School students. The major objectives of the study were (i) to find out the extent of the relationship between criterion variable (career preference) and predictive variables (emotional intelligence, parent-child relationship and personal values) among the total sample and sample sub-groups. This study finds that an insignificant correlation was observed for parent-child relationship in the case of the Secondary School sample and total female sample.

Saleem Ahmed (2017) investigated government & private school students in relation to their personality traits, intelligence & value patterns. The objectives of the study regarding Personality Traits, intelligence and value patterns of government and private Schools. The sample size of the study was 1600 students of class IX to XII from govt. and private schools. The normative survey method was employed for this investigation. The findings of the study is difference between the Personality Traits of the government and private school students was found to be significant.

P. Fernandez conducted a study on emotional intelligence and personality traits in relation to academic achievement among prospective teachers. This study attempts to find out the Emotional Intelligence and Personality Traits in relation to Academic Achievement among Prospective teachers. The findings of the study were that the level of emotional intelligence is high among the prospective teachers. The levels of personality traits and academic achievement are medium among the prospective teachers.

Studies related to Techno-Pedagogical Competency:

Baregama, Shipra (2022) Studied techno-pedagogical competencies of secondary school teachers in relation to English and Science subjects. A descriptive survey method has been used in this study. The sample of the present study includes 600 secondary school teachers of which 300 are English subject and 300 of science subjects. The findings of the study reveal that there exist below-average to extremely high levels of techno-pedagogical competency and low to high levels of techno-pedagogical content competency.

Sobha (2021) studied teacher techno-pedagogical competency of senior secondary teachers in relation to their teaching style and teacher effectiveness. A normative survey research design was adopted to investigate the relationship of techno - pedagogical competency. The findings of the study have shown Performance of the senior secondary school teachers was found to be average for their techno-pedagogical competency. The teaching style of senior secondary school teachers was found to be average and maximum school teachers obtained average scores in all respective dimensions of teaching style.

Kumar, M. Satheesh (2021) conducted a study on. The main objective of the study was i) To find out the level of digital competence of Prospective Teachers. ii) To find out the level of the techno-pedagogical skills of

Prospective Teachers. iii) To find out the level of the teacher effectiveness of Prospective Teachers. iv) To find out whether the digital competence of Prospective Teachers differs significantly.

C. Boopathiraj (2015) conducted a study on incorporating techno-pedagogic input in an E-learning portfolio. The main objectives of the research were i) To identify the techno-pedagogic principles of developing e-course material for mastery learning on Research in Education. ii) To develop an instructional design based on the learning objectives of Research in Education. Pre-test and post-test control and experimental group design were adopted in this study. The findings of the study were There is no significant difference between the pre-test and post-test scores of Control group PG student teachers" in their attitude towards Research, Attitude towards Educational Research, and Awareness on the Techno-Pedagogical incorporation and e-portfolio.

EMERGENCE AND JUSTIFICATION OF THE PROBLEM:

The emergence and justification of the problem outlined in the title, "Emotional Intelligence, Personality, and Techno-Pedagogical Competency in Secondary Level Teachers of Government and Private Schools: A Comparative Study," stems from several critical considerations within the realm of contemporary education. Firstly, as educational paradigms shift towards more learner-centered approaches, the role of teachers as facilitators of holistic development and academic achievement becomes increasingly paramount. Within this context, understanding the factors that influence teacher effectiveness and professional competency is imperative. Emotional intelligence, personality traits, and techno-pedagogical competencies represent key dimensions that shape the teaching-learning process and significantly impact student outcomes.

The rising emphasis on emotional intelligence in education underscores the importance of educators' ability to understand and manage their own emotions, as well as effectively navigate interpersonal dynamics within the classroom. Research suggests that teachers with higher levels of emotional intelligence tend to create supportive learning environments, foster positive teacher-student relationships, and effectively manage classroom dynamics, thereby enhancing student engagement and academic achievement.

Personality traits play a crucial role in shaping teaching practices, instructional approaches, and classroom management strategies. Teachers with diverse personality profiles may exhibit varying levels of adaptability, openness to new ideas, and interpersonal skills, which in turn can influence their effectiveness in catering to the diverse needs and learning styles of students.

The integration of technology in pedagogy has become increasingly prevalent in today's digital age. Techno-pedagogical competencies encompass educators' ability to leverage technological tools, digital resources, and online platforms to enhance instructional delivery, facilitate active learning experiences, and promote digital literacy among students. Given the rapid evolution of educational technologies, teachers' proficiency in integrating technology into their teaching practices is essential for preparing students for the demands of the 21st-century workforce.

The comparative aspect of the study between government and private school teachers adds a nuanced dimension to the research inquiry. While both cohorts share the overarching goal of fostering student learning and development, differences in institutional contexts, resource allocation, professional development opportunities, and organizational cultures may influence the manifestation of emotional intelligence, personality traits, and techno-pedagogical competencies among teachers from these sectors.

Therefore, the emergence of this research problem is justified by the need to explore and understand the interplay between emotional intelligence, personality traits, and techno-pedagogical competencies among secondary level teachers, while also considering potential variations between government and private school contexts. By addressing this research gap, the study aims to inform educational policies, teacher training programs, and professional development initiatives aimed at enhancing teacher effectiveness and promoting student success in diverse educational settings.

Thus, this study will be a new trend in the field of education and will answer the research questions as follows.

- What kind of Emotional Intelligence in secondary level school teachers of government and private schools?
- What is the status of Personality in secondary level school teachers of government and private schools?
- What is the level of Techno Pedagogical Competencies in secondary level school teachers of government and private schools?
- What are the interconnected relationships between emotional intelligence, personality traits, and techno-pedagogical competencies among secondary level teachers?

NEED AND SIGNIFICANCE OF THE STUDY

The research on Emotional Intelligence, Personality, and Techno-Pedagogical Competency in Secondary Level Teachers of Government and Private Schools is noteworthy because it can provide light on crucial areas of teacher effectiveness and educational practice. Understanding secondary-level teachers' emotional intelligence levels, personality traits, and techno-pedagogical competencies across school types can help tailor teacher training programs, curriculum development, and classroom management strategies to improve overall educational outcomes. By comparing these parameters among government and private school instructors, the study can shed light on potential discrepancies and possibilities for reform in the education sector. Finally, the findings can help to improve teaching techniques, creating a more helpful and effective learning environment for students in a variety of educational settings.

STATEMENT OF THE PROBLEM:

In the context of the above justification, the statement of the present problem is “Emotional Intelligence, Personality and Techno-Pedagogical Competency in Secondary Level Teachers of Government and Private Schools: A Comparative Study.”

OPERATIONAL DEFINITIONS OF THE TECHNICAL TERMS TO BE USED IN THE STUDY:

The definition of key terms means expounding and elaborating on the higher-order concepts that have been presented in the statement of the problem. This is being done to clarify the various aspects of the problem and the basic premises from which the problem has emerged.

Emotional Intelligence: Emotional Intelligence may be defined as the ability to perceive, understand, and manage their own emotions.

Mayer and Salovey (1993) defined emotional intelligence as the ability to monitor one’s own and other’s feelings and emotions to discriminate among them and to use this information to guide one’s thinking and action.

Operational Definition

In this study Emotional Intelligence means the score obtained from the scale namely Teachers Emotional Intelligence Scale by N. Asraf and S. Jamal.

Personality: Personality has been defined as the enduring patterns of thoughts, feelings, and behaviors that characterize an individual and distinguish them from others.

Gordon Allport (1937): Allport, one of the pioneers of personality psychology, defined personality as "the dynamic organization within the individual of those psychophysical systems that determine his characteristic behavior and thought."

Operational Definition

In this study, Personality means the score obtained from the scale namely Five Personality Trait Inventory by Prof. K.S. Misra.

Techno-Pedagogical Competency: Techno-pedagogical competency have been defined as the ability of teachers to effectively integrate technology into pedagogical practices to enhance teaching and learning outcomes.

Operational Definition

In this study Techno-Pedagogical competency means the score obtained from the scale namely Teacher's Techno-Pedagogical Competence Scale (TTPCS-RSSK) S. Rajashekhar and K. Sathiyaraj.

Secondary Level Teachers:

Operational Definition: In the present study secondary level teachers are the teachers working in secondary educational institutions that offer education primarily to students at the secondary level of class IX to class XII.

Government Schools:

Operational Definition: In this study Government schools refer to only those secondary Level Educational institutions that are funded by the Government of West Bengal and administered by West Bengal Board of Secondary Education or West Bengal Board of Madrasah Education.

Private School:

Operational Definition: In the present study Private school means those secondary level educational institutions that are funded and operated by welfare trust or private management of West Bengal and affiliated by West Bengal Secondary Education or Central Board of Secondary Education (CBSE).

OBJECTIVES OF THE STUDY

1. To study the emotional intelligence among secondary level teachers in government and private schools.
2. To compare the emotional intelligence between secondary level teachers in government and private schools.
3. To study the personality traits of secondary level teachers in government and private schools.
4. To compare the levels of personality traits between secondary level teachers in government and private schools.
5. To study the techno-pedagogical competencies of secondary level teachers in government and private schools.

6. To compare the levels of techno-pedagogical competencies between secondary level teachers in government and private schools.
7. To explore potential correlations between emotional intelligence, personality traits, and techno-pedagogical competencies among secondary level teachers.

HYPOTHESIS

H01 There is no significant difference in the emotional intelligence between male and female teachers of government schools.

H02 There is no significant difference in the emotional intelligence between male and female teachers of private schools.

H03 There is no significant difference in the emotional intelligence between secondary level teachers in government and private schools.

H04 There is no significant difference in the personality traits in between male and female secondary level teachers in government schools.

H05 There is no significant difference in the personality traits in between male and female secondary level teachers in private schools.

H06 There is no significant difference in the personality traits between secondary level teachers of government and private schools.

H07 There is no significant difference in the techno-pedagogical competencies in between male and female secondary level teachers in government schools.

H08 There is no significant difference in the techno-pedagogical competencies in between male and female secondary level teachers in private schools.

H09 There is no significant difference in the techno-pedagogical competencies between secondary level teachers in government and private schools.

H010 There is no significant correlation among Emotional Intelligence, Personality traits and Techno-Pedagogical competencies between secondary level government and Private school teachers.

METHODOLOGY OF THE STUDY

VARIABLES OF THE STUDY

There are three variables considered for the study.

- i. Emotional Intelligence
- ii. Personality
- iii. Techno-Pedagogical Competency

METHOD OF THE STUDY

A descriptive Survey Research Method will be used for the study.

AREA OF THE STUDY

The area of the proposed study will be Murshidabad district of West Bengal, India.

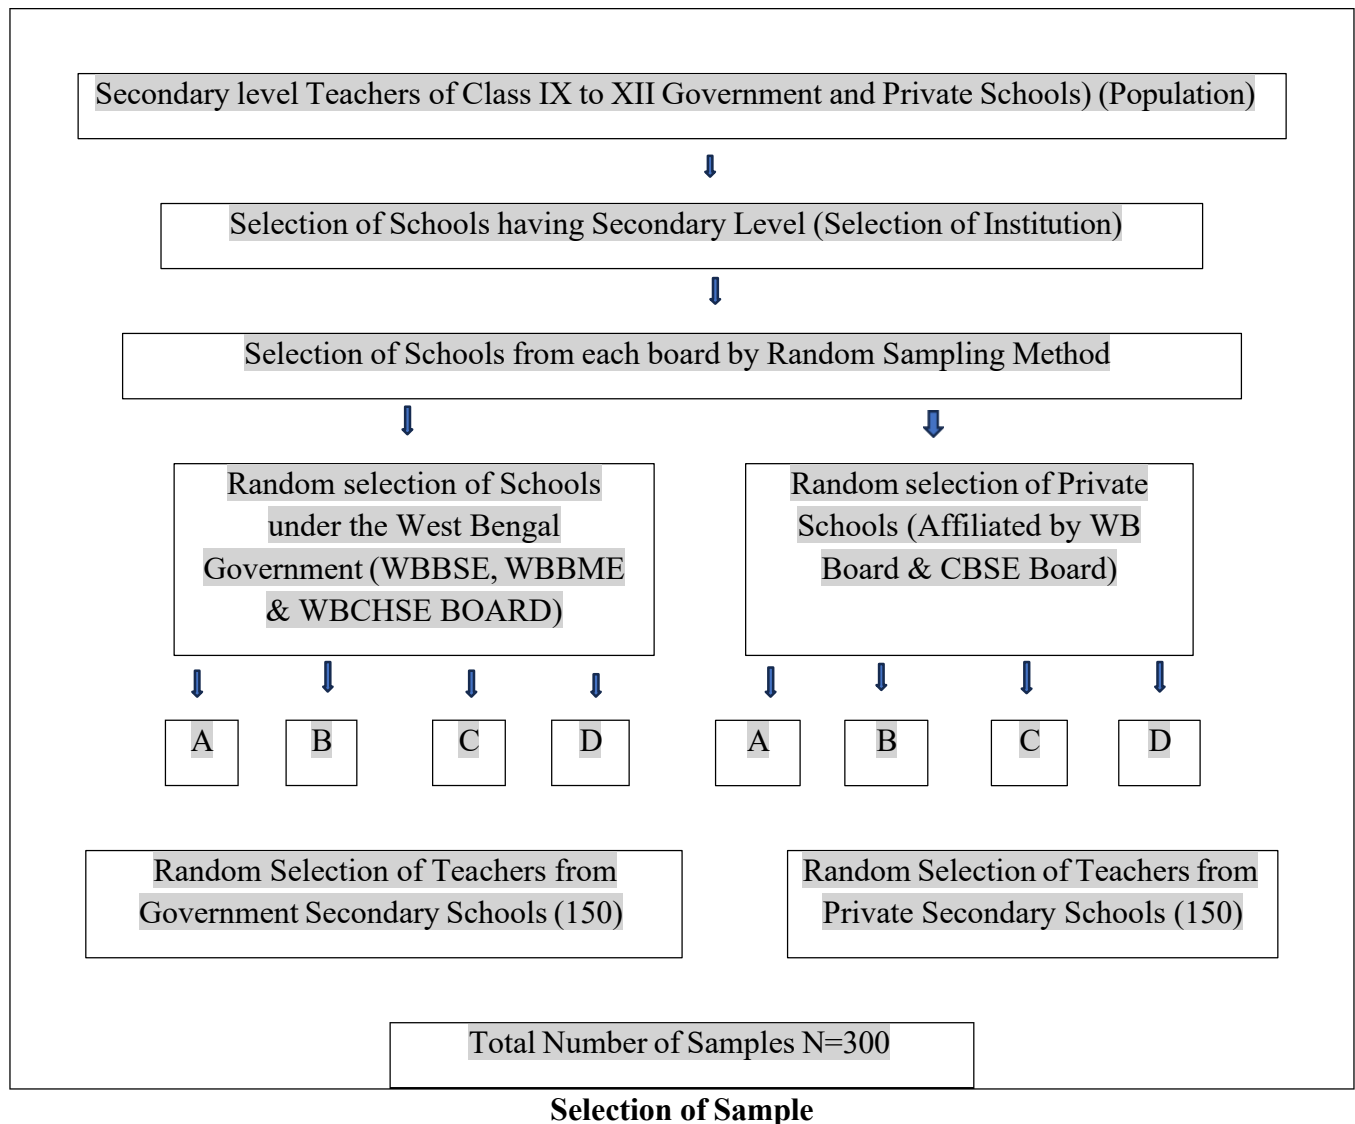

POPULATION OF THE STUDY

A population is any group of individuals who have one or more characteristics in common that are of interest to the researcher.

The population of the present study comprised all the teachers of classes IX to XII of the secondary schools under West Bengal Board of Secondary Education (WBBSE), West Bengal Board of Madrasa Education (WBBME), West Bengal Council of Higher Secondary Education (WBCHSE) and Private Schools affiliated by West Bengal Board of Secondary Education and Central Board of Secondary Education (CBSE) in Murshidabad District of West Bengal, India.

SAMPLE AND SAMPLE SELECTION

The investigators selected 15 Government and 15 Private Secondary schools for the study. The Sample of 300 secondary school teachers (IX to XII Class) teaching in Government schools affiliated to WBBSE, WBBME, WBCHSE and Private school boards will be selected by multistage random sampling method. The procedure of sample selection is presented in the form of a flow chart as follows:

TOOLS OF THE STUDY

1. Teachers Emotional Intelligence Scale by N. Asraf and S. Jamal
2. Five Personality Trait Inventory by Prof. K.S. Misra.
3. Teacher's Techno-Pedagogical Competence Scale (TTPCS-RSSK) S. Rajashekhar and K. Sathiyaraj.

STATISTICAL TECHNIQUES

For the analysis of data, the following statistical techniques will be used.

- i. Descriptive statistics (Mean, SD)
- ii. Inferential statistics (T-test, Correlation, Multiple Correlation)

DELIMITATIONS OF THE STUDY

The proposed study will be delimited as

- i. The study will be delimited to Secondary level teachers of Class IX to XII only.
- ii. Secondary level school Teachers of Murshidabad district will be considered for this investigation.
- iii. The sample would be taken from multistage random sampling techniques from different schools of Murshidabad district.
- iv. The study will be delimited to Government and Private schools in Murshidabad district only.
