Subject: Regarding the submission of research proposal

Respected Sir/Madam,

I, Ms. Zara Naujawan, RA2522028010025, II Year M.Sc. Clinical Psychology student, hereby submit my research proposal titled "The Relationship Between Childhood Emotional Neglect, People-Pleasing Behaviour, and Assertiveness Among Young Adults" under the guidance of Ms. Sonal Sunil Mahadik, Assistant Professor, Department of Clinical Psychology.

Kindly do the needful.

Thanking you.

Yours respectfully,

Ms. Zara Naujawan

Co-Investigator: Ms. Sonal Sunil Mahadik

Designation: Assistant Professor

Department: Department of Clinical Psychology

Date of Approval by SRM Scientific Committee: _____

Primary and Secondary Objectives of the Study:

Primary Objective:

To examine the relationship between childhood emotional neglect, people-pleasing behaviour, and

assertiveness among young adults.

Secondary Objectives:

1. To assess childhood emotional neglect, people-pleasing behaviour, and assertiveness among young

adults.

2. To determine the relationship between childhood emotional neglect and people-pleasing behaviour

among young adults.

3. To determine the relationship between childhood emotional neglect and assertiveness among young

adults.

4. To determine the relationship between people-pleasing behaviour and assertiveness among young adults.

Background and Justification for the Conduct of the Study:

Young adulthood is an important developmental period characterized by growing autonomy, identity exploration, higher education or employment, intimate relationships, and increasing responsibility for individual decisions. During this period, interpersonal competence becomes important because young adults are increasingly required to communicate their needs, establish boundaries, maintain relationships, and express their opinions. Assertiveness is particularly relevant because it involves expressing one's needs, feelings, preferences, rights, and boundaries while respecting the rights of others.

Childhood emotional neglect refers to the persistent lack of emotional responsiveness, affection, validation, attention, support, and psychological availability from caregivers. Although emotional neglect may not involve an obvious harmful event, research indicates that it may be associated with difficulties in emotional processing, self-esteem, emotional regulation, resilience, attachment, and later interpersonal functioning.

People-pleasing behaviour refers to a tendency to place the needs or goals of others before one's own, seek approval, avoid disappointing others, suppress personal preferences, and experience difficulty saying no. Recent research has identified people-pleasing as a measurable interpersonal construct and has examined its relationship with mental well-being and perceived social support. People-pleasing may be particularly relevant to assertiveness because a strong focus on acceptance and avoidance of disagreement may interfere with expressing personal needs and boundaries.

Existing literature provides evidence concerning childhood emotional neglect, people-pleasing or approval-oriented behaviour, and assertiveness separately. However, the direct relationships among all three constructs have not been fully examined, particularly among Indian young adults. The present study therefore proposes to examine these relationships simultaneously in an Indian young adult sample.

REVIEW OF LITERATURE

Author & Year	Title	Main Variable	Key Findings
Kamboj & Soni (2023)	Effect of Childhood Emotional Neglect and Perceived Peer Support on Resilience Among Young Adults	Childhood Emotional Neglect	Emotional neglect was negatively related to resilience. Peer support was not significantly related to resilience.
Varshini & Jha (2025)	Relationship Between People-Pleasing and Risk-Taking Behavior in Emerging Adults: Role of Perceived Social Support as a Mediator	People-Pleasing	People-pleasing was negatively associated with perceived social support and slightly negatively related to risk-taking. Social support did not mediate the relationship.
Plantade-Gipch et al. (2023)	Emotional Regulation, Attachment Style, and Assertiveness as Determinants of Well-being in Emerging Adults	Assertiveness	Assertiveness was associated with better well-being, while insecure attachment was linked to poorer emotional regulation and lower well-being.
Rongwei Sun (2026)	The Relationship Between Childhood Emotional Neglect and Adolescent People-Pleasing	Childhood Emotional Neglect + People-Pleasing	Emotional neglect may contribute to people-pleasing through low self-worth, insecure attachment, attribution biases, and poor boundaries.

Syawa, Hutahaeen & Muzzamil (2026)	The Relationship Between Assertiveness and Self-Esteem Among Students Who Experience People-Pleasing Behavior	People-Pleasing + Assertiveness	A significant negative relationship was found between assertiveness and self-esteem (Kendall's $\tau_b = -.198, p < .001$). Strengthening self-esteem may help address people-pleasing behaviour.
------------------------------------	---	---------------------------------	--

Research Gap:

Although childhood emotional neglect has been studied in relation to emotional regulation, attachment, resilience, depression, and relationship functioning, and assertiveness has been studied in relation to communication and psychological functioning, limited research has directly examined childhood emotional neglect, people-pleasing behaviour, and assertiveness together. Recent Indian work also indicates the relevance of these constructs in the Indian context. Therefore, the present study aims to examine their direct relationships among young adults.

Study Hypotheses / Research Question:

Hypotheses:

H1: There will be a significant positive relationship between childhood emotional neglect and people-

pleasing behaviour among young adults.

H2: There will be a significant negative relationship between childhood emotional neglect and assertiveness among young adults.

H3: There will be a significant negative relationship between people-pleasing behaviour and assertiveness among young adults.

H4: Childhood emotional neglect and people-pleasing behaviour will significantly predict assertiveness among young adults.

Methodology

i. Study Design

A quantitative, cross-sectional correlational research design will be used. Childhood emotional neglect, people-pleasing behaviour, and assertiveness will be examined as continuous study variables. The cross-sectional design involves collecting data at one point in time; therefore, statistically significant findings will be interpreted as associations or predictive relationships and not as evidence of causation.

ii. Sample Size with Justification:

Proposed sample size: 98 young adults.

The sample size was calculated using the Fisher z-transformation method for identifying a correlation coefficient, using $r = 0.28$, $Z\alpha = 1.96$, and $Z\beta = 0.84$, resulting in an estimated sample size of approximately 97.7, rounded to 98.

iii. Number of Groups

One group – young adults aged 18–25 years. As this is an observational correlational study, participants will not be allocated into intervention and control groups.

iv. Inclusion Criteria

1. Young adults aged 18–25 years.
2. Participants who have lived and grew up with their parents.
3. Participants who provide informed consent.
4. Participants who are able to read and understand English or the approved language of questionnaire administration.
5. Participants who complete the study questionnaires sufficiently for analysis.

v. Exclusion Criteria

1. Individuals currently undergoing psychiatric treatment.
2. Individuals whose both parents are deceased.
3. Individuals with only one living parent.
4. Individuals whose parents are separated or divorced.

vi. Investigations / Procedures to be Done

After obtaining Scientific Committee and Institutional Ethics Committee approval, eligible participants will be provided with information regarding the purpose and procedure of the study. Informed consent will be obtained before participation. Participants will complete a brief sociodemographic sheet and three standardized self-report measures:

1. Sociodemographic data sheet.
2. Emotional Neglect subscale of the Childhood Trauma Questionnaire–Short Form (CTQ-SF) – 5 items.
3. Martin-Larsen Approval Motivation Scale (MLAMS) – 20 items.
4. Rathus Assertiveness Schedule (RAS) – 30 items.vii

. Brief Procedure:

Following Departmental Research Committee approval, Scientific Committee clearance, and Institutional Ethics Committee clearance, participants who fulfil the eligibility criteria will be recruited through colleges, universities, and young-adult community networks. Eligible participants will receive the Participant Information Sheet and informed consent will be obtained. Participants will then complete the sociodemographic form, CTQ-SF Emotional Neglect subscale, MLAMS, and RAS. The collected responses will be screened for eligibility, missing responses, and duplicate entries and then coded for statistical analysis using IBM SPSS Statistics.

Statistical Analysis:

Data will be analysed using IBM SPSS Statistics Version 26.0.

- Data screening: Data will be screened for eligibility, missing values, duplicate responses, distributional characteristics, and outliers.
- Descriptive statistics: Frequencies and percentages will summarize categorical sociodemographic variables, while mean, standard deviation, minimum, and maximum will summarize continuous study variables as appropriate.
- Correlation: Pearson's product-moment correlation coefficient will be used to examine the relationships among childhood emotional neglect, people-pleasing behaviour, and assertiveness when parametric assumptions are satisfied. Spearman's rank-order correlation will be used in case of significant normality violations.
- Regression: Multiple linear regression will be used to determine whether childhood emotional neglect and people-pleasing behaviour significantly predict assertiveness.

- The level of statistical significance will be set at $p < .05$. Setting in Which Subjects Will Be Recruited From: Colleges, universities, and young-adult community networks in the geographical area, using online and offline recruitment methods.

Period of Recruitment:

Approximately 3–4 months following receipt of the required ethical approval. Potential Risks Involved to Participants: The study involves minimal physical risk. However, participants may experience mild temporary emotional discomfort, sadness, uneasiness, or unpleasant memories while responding to questions about childhood emotional experiences. Participants will be informed of this possibility, participation will be voluntary, and confidentiality will be maintained.

Benefits Reasonably Expected by the Participant:

There may be no direct therapeutic or clinical benefit. Participation may provide an opportunity to reflect on interpersonal tendencies such as approval-seeking, people-pleasing, boundary-setting, and assertive communication. At a broader level, the findings may contribute to understanding the relationship between childhood emotional neglect, people-pleasing behaviour, and assertiveness among young adults and may inform future psychoeducation, counselling, boundary-setting, and Assertiveness-training programmes.

Exemption From Obtaining Informed Consent:

No.

Informed consent will be obtained from all participants prior to participation.

Whether Consent Forms Part I and II in English and Tamil Are Enclosed:

Yes

Children's Assent:

Not applicable.

Case Report Form / Data Collection Form:

Title of the Project

The Relationship Between Childhood Emotional Neglect, People-Pleasing Behaviour, and Assertiveness Among Young Adults

Name of the Principal Investigator:

Ms. Zara Naujawan

II M.Sc. Clinical Psychology

Department of Clinical Psychology

SRM School of Allied Health Sciences

Name of the Co-Investigator:

Ms. Sonal Sunil Mahadik

Assistant Professor

Department of Clinical Psychology

SRM School of Allied Health Sciences

Purpose of the Study:

Young adulthood is an important developmental period involving greater autonomy, identity exploration, interpersonal relationships, and increased responsibility for personal decisions. During this period, interpersonal competence becomes important because young adults are increasingly required to communicate their needs, establish boundaries, maintain relationships, and express their opinions.

The purpose of the present study is to examine the relationship between childhood emotional neglect, people-pleasing behaviour, and assertiveness among young adults aged 18–25 years. The study will also examine whether childhood emotional neglect and people-pleasing behaviour significantly predict assertiveness among young adults.

Procedure of the Study:

If you agree to participate in this study, you will first be provided with information regarding the purpose and procedure of the research and your informed consent will be obtained. You will then be asked to provide basic sociodemographic information.

You will be asked to complete three questionnaires assessing childhood emotional neglect, people-pleasing behaviour, and assertiveness. These include the Emotional Neglect subscale of the Childhood Trauma Questionnaire–Short Form (CTQ-SF), the Martin-Larsen Approval Motivation Scale (MLAMS), and the Rathus Assertiveness Schedule (RAS).

Data will be collected through online and/or offline modes. Participation will be completely voluntary. You may choose not to answer any question where permitted by the approved study procedure or withdraw from the study at any time without any penalty. The information collected will be kept confidential and will be used only for research purposes.

Expected Benefits:

There may be no direct personal benefit from participating in this study. However, participation may provide an opportunity to reflect on interpersonal tendencies such as approval-seeking, people-pleasing, boundary-setting, and assertive communication. The information obtained from this study may contribute to a better understanding of the relationship between childhood emotional neglect, people-pleasing behaviour, and assertiveness among young adults. The findings may also provide a basis for future psychoeducation, counselling, boundary-setting, and assertiveness-training programmes.

Any Risks Expected from the Study:

This is a questionnaire-based study and involves minimal risk. Some participants may experience mild temporary emotional discomfort, sadness, uneasiness, or unpleasant memories while responding to questions related to childhood emotional experiences. Participation is completely voluntary, and you may choose not to answer a question where permitted or withdraw from the study at any point without providing a reason. Confidentiality and anonymity of the information provided will be maintained.

Compensation

Participation in this research study is entirely voluntary. No monetary compensation, incentive, or reimbursement will be provided for participation in the study. Participation will not involve any financial cost to the participant.

ஆய்வின் நோக்கம்

இளம் வயது என்பது அதிக சுயாட்சி, அடையாளத்தை ஆராய்தல், தனிநபர் உறவுகள் மற்றும் தனிப்பட்ட முடிவுகளுக்கான அதிகரித்த பொறுப்பு ஆகியவற்றை உள்ளடக்கிய முக்கியமான வளர்ச்சிக் காலமாகும். இந்தக் காலகட்டத்தில், இளம் வயது பெரியவர்கள் தங்களது தேவைகளைத் தெரிவிப்பது, எல்லைகளை அமைத்துக்கொள்வது, உறவுகளைப் பேணுவது மற்றும் தங்களது கருத்துகளை வெளிப்படுத்துவது ஆகியவற்றை அதிகமாக எதிர்கொள்ள வேண்டியிருப்பதால், பிறருடனான திறமையான தொடர்பு முக்கியத்துவம் பெறுகிறது.

இவ்வாய்வின் நோக்கம் 18 முதல் 25 வயது வரையிலான இளம் வயது பெரியவர்களிடையே குழந்தைப் பருவ உணர்ச்சி புறக்கணிப்பு, பிறரை மகிழ்விக்கும் நடத்தை மற்றும் தன்னுறுதியுடன் வெளிப்படுத்தும் திறன் ஆகியவற்றிற்கிடையேயான தொடர்பை ஆய்வு செய்வதாகும். மேலும், குழந்தைப் பருவ உணர்ச்சி புறக்கணிப்பு மற்றும் பிறரை மகிழ்விக்கும் நடத்தை ஆகியவை தன்னுறுதியுடன் வெளிப்படுத்தும் திறனை குறிப்பிடத்தக்க அளவில் கணிக்கிறதா என்பதும் ஆய்வு செய்யப்படும்.

ஆய்வின் நடைமுறை

நீங்கள் இந்த ஆய்வில் பங்கேற்க சம்மதித்தால், முதலில் ஆய்வின் நோக்கம் மற்றும் நடைமுறை குறித்த தகவல்கள் உங்களுக்கு வழங்கப்பட்டு, உங்களிடமிருந்து தகவலறிந்த சம்மதம் பெறப்படும். பின்னர் அடிப்படை சமூக-மக்கள்தொகைத் தகவல்களை வழங்குமாறு கேட்கப்படுவீர்கள்.

குழந்தைப் பருவ உணர்ச்சி புறக்கணிப்பு, பிறரை மகிழ்விக்கும் நடத்தை மற்றும் தன்னுறுதியுடன் வெளிப்படுத்தும் திறனை மதிப்பிடும் மூன்று கேள்வித்தாள்களை நீங்கள் நிறைவு செய்ய வேண்டும். அவை: குழந்தைப் பருவ அதிர்ச்சி கேள்வித்தாள் - குறுகிய வடிவம் (CTQ-SF) இன் உணர்ச்சி புறக்கணிப்பு துணைப்பிரிவு, மார்டின்-லார்சன் ஒப்புதல் உந்துதல் அளவுகோல் (MLAMS), மற்றும் ரத்தஸ் தன்னுறுதி வெளிப்படுத்தும் அட்டவணை (RAS) ஆகும்.

தரவு இணையவழி மற்றும்/அல்லது நேரடி முறையில் சேகரிக்கப்படும். பங்கேற்பு முற்றிலும் தன்னார்வமானது. அங்கீகரிக்கப்பட்ட ஆய்வு நடைமுறைக்கு உட்பட்டு, எந்தவொரு கேள்விக்கும் பதிலளிக்காமல் இருக்கலாம் அல்லது எந்த நேரத்திலும் எந்தவித தண்டனையும் இன்றி ஆய்விலிருந்து விலகலாம். சேகரிக்கப்பட்ட தகவல்கள் ரகசியமாகப் பாதுகாக்கப்பட்டு, ஆராய்ச்சி நோக்கங்களுக்காக மட்டுமே பயன்படுத்தப்படும்.

எதிர்பார்க்கப்படும் நன்மைகள்

இந்த ஆய்வில் பங்கேற்பதன் மூலம் நேரடியான தனிப்பட்ட நன்மை கிடைக்காமல் இருக்கலாம். இருப்பினும், பிறரின் ஒப்புதலை நாடுதல்,

பிறரை மகிழ்விக்கும் நடத்தை, தனிப்பட்ட எல்லைகளை அமைத்தல் மற்றும் தன்னுறுதியுடன் தொடர்புகொள்வது போன்ற தனிப்பட்ட உறவு சார்ந்த போக்குகளைப் பற்றி சிந்திக்க இது ஒரு வாய்ப்பை வழங்கக்கூடும். இவ்வாய்விலிருந்து பெறப்படும் தகவல்கள் இளம் வயது பெரியவர்களிடையே குழந்தைப் பருவ உணர்ச்சி புறக்கணிப்பு, பிறரை மகிழ்விக்கும் நடத்தை மற்றும் தன்னுறுதியுடன் வெளிப்படுத்தும் திறன் ஆகியவற்றிற்கிடையேயான தொடர்பை சிறப்பாகப் புரிந்துகொள்ள உதவும். மேலும், எதிர்கால உளவியல் கல்வி, ஆலோசனை, தனிப்பட்ட எல்லை அமைத்தல் மற்றும் தன்னுறுதி பயிற்சி திட்டங்களுக்கு இம்முடிவுகள் அடிப்படையாக அமையக்கூடும்.

ஆய்வினால் ஏற்படக்கூடிய ஆபத்துகள்

இது கேள்வித்தாள்களை அடிப்படையாகக் கொண்ட ஆய்வாகும் மற்றும் குறைந்தபட்ச ஆபத்தையே கொண்டுள்ளது. குழந்தைப் பருவ உணர்ச்சி அனுபவங்கள் தொடர்பான கேள்விகளுக்கு பதிலளிக்கும் போது சில பங்கேற்பாளர்களுக்கு லேசான மற்றும் தற்காலிகமான மனஅசௌகரியம், சோகம், சங்கடம் அல்லது விரும்பத்தகாத நினைவுகள் ஏற்படக்கூடும். பங்கேற்பு முற்றிலும் தன்னார்வமானது. அனுமதிக்கப்பட்ட நடைமுறைக்கு உட்பட்டு, எந்தவொரு கேள்விக்கும் பதிலளிக்காமல் இருக்கலாம் அல்லது எந்த காரணத்தையும் தெரிவிக்காமல் எந்த நேரத்திலும் ஆய்விலிருந்து விலகலாம். வழங்கப்படும் தகவல்களின் ரகசியத்தன்மையும் பெயரறியாமையும் பாதுகாக்கப்படும்.

ஊதியம் / இழப்பீடு

இந்த ஆய்வில் பங்கேற்பது முற்றிலும் தன்னார்வமானது. பங்கேற்பதற்காக எந்தவொரு பண இழப்பீடு, ஊக்கத்தொகை அல்லது செலவுத்தொகையும் வழங்கப்படாது. பங்கேற்பாளருக்கு எந்தவொரு நிதிச் செலவும் ஏற்படாது.

முதன்மை ஆய்வாளரின் முகவரி மற்றும் தொடர்பு விவரங்கள்

6. Place of Residence:

- ☐ Urban
- ☐ Rural
- ☐ Semi-urban

Childhood emotional neglect scale

The Childhood Trauma Questionnaire–Short Form (CTQ-SF) was developed by David P. Bernstein and colleagues and the short form was validated in 2003. It is a self-report questionnaire designed to assess experiences of childhood maltreatment and neglect retrospectively.

Childhood Emotional Neglect Questionnaire		
Name: _____	Age: _____	
Gender: _____	Date: _____	
Answer yes or no to each question. These answers give you a window into the areas where you may have experienced emotional neglect as a child. Do you...		
Statements	Yes	No
1. Sometimes feel like you don't belong when with your family or friends?	☐	☐
2. Pride yourself on not relying upon other?	☐	☐
3. Have difficulty asking for help?	☐	☐
4. Have friends or family who complain that you are aloof or distant?	☐	☐
5. Feel you have not met your potential in life?	☐	☐
6. Often just want to be left alone?	☐	☐
7. Secretly feel that you may be a fraud?	☐	☐
8. Tend to feel uncomfortable in social situations?	☐	☐
9. Often feel disappointed with, or angry at, yourself?	☐	☐
10. Judge yourself more harshly than you judge others?	☐	☐
11. Compare yourself to others and often find yourself sadly lacking?	☐	☐
12. Find it easier to love animals than people?	☐	☐
13. Often feel irritable or unhappy for no apparent reason?	☐	☐
14. Have trouble knowing what you're feeling?	☐	☐
15. Have trouble identifying your strengths and weaknesses?	☐	☐
16. Sometimes feel like you're on the outside looking in?	☐	☐
17. Believe you're one of those people who could easily live as a hermit?	☐	☐
18. Have trouble calming yourself?	☐	☐
19. Feel there's something holding you back from being present in the moment?	☐	☐
20. At times feel empty inside?	☐	☐
21. Secretly feel there's something wrong with you?	☐	☐
22. Struggle with self-discipline?	☐	☐

The **Martin–Larsen Approval Motivation Scale (MLAMS)** is a self-report psychological scale developed to measure a person's **desire to gain approval from others and avoid disapproval or rejection**. The revised measure was developed by **H. J. Martin in 1984**.

1. Depending upon the people involved, I react to the same situation in different ways.

2. I would rather be myself than be well thought of. (R)*

3. Many times I feel like just flipping a coin in order to decide what I should do.

4. I change my opinion (or the way that I do things) in order to please someone else.*

5. In order to get along and be liked, I tend to be what people expect me to be.*

6. I find it difficult to talk about my ideas if they are contrary to group opinion.*

7. One should avoid doing things in public which appear to be wrong to others, even though one knows that he is right.

8. Sometimes I feel that I don't have enough control over the direction that my life is taking.

9. It is better to be humble than assertive when dealing with people.

10. I am willing to argue only if I know that my friends will back me up.*

11. If I hear that someone expresses a poor opinion of me, I do my best the next time that I see this person to make a good impression.

12. I seldom feel the need to make excuses or apologize for my behavior. (R)*

13. It is not important to me that I behave 'properly' in social situations. (R)*

14. The best way to handle people is to agree with them and tell them what they want to hear.

15. It is hard for me to go on with my work if I am not encouraged to do so.

16. If there is any criticism or anyone says anything about me, I can take it. (R)*

17. It is wise to flatter important people.

18. I am careful at parties and social gatherings for fear that I will do or say things that others won't like.*

19. I usually do not change my position when people disagree with me. (R)*

20. How many friends you have depends on how nice a person you are.

(R) Reverse scored item.

*Items in short form.

1=Disagree Strongly, 2=Disagree, 3=No Opinion, 4=Agree, 5=Agree Strongly

The Rathus assertiveness Schedule was developed by Spencer A. Rathus in 1973. It is a 30-item self-report scale designed to assess assertive behaviour in different interpersonal situations. Each item is rated on a 6-point scale ranging from -3 to +3. Some items are reverse scored, and the total score ranges from -90 to +90. Higher scores indicate higher levels of assertiveness

TABLE 1
Rathus Assertiveness Schedule

Directions: Indicate how characteristic or descriptive each of the following statements is of you by using the code given below.

- +3 very characteristic of me, extremely descriptive*
- +2 rather characteristic of me, quite descriptive
- +1 somewhat characteristic of me, slightly descriptive
- 1 somewhat uncharacteristic of me, slightly nondescriptive
- 2 rather uncharacteristic of me, quite nondescriptive
- 3 very uncharacteristic of me, extremely nondescriptive

1. Most people seem to be more aggressive and assertive than I am.*
2. I have hesitated to make or accept dates because of "shyness."*
3. When the food served at a restaurant is not done to my satisfaction, I complain about it to the waiter or waitress.
4. I am careful to avoid hurting other people's feelings, even when I feel that I have been injured.*
5. If a salesman has gone to considerable trouble to show me merchandise which is not quite suitable, I have a difficult time in saying "No."*
6. When I am asked to do something, I insist upon knowing why.
7. There are times when I look for a good, vigorous argument.
8. I strive to get ahead as well as most people in my position.
9. To be honest, people often take advantage of me.*
10. I enjoy starting conversations with new acquaintances and strangers.
11. I often don't know what to say to attractive persons of the opposite sex.*
12. I will hesitate to make phone calls to business establishments and institutions.*
13. I would rather apply for a job or for admission to a college by writing letters than by going through with personal interviews.*
14. I find it embarrassing to return merchandise.*
15. If a close and respected relative were annoying me, I would smother my feelings rather than express my annoyance.*
16. I have avoided asking questions for fear of sounding stupid.*
17. During an argument I am sometimes afraid that I will get so upset that I will shake all over.*
18. If a famed and respected lecturer makes a statement which I think is incorrect, I will have the audience hear my point of view as well.
19. I avoid arguing over prices with clerks and salesmen.*
20. When I have done something important or worthwhile, I manage to let others know about it.
21. I am open and frank about my feelings.
22. If someone has been spreading false and bad stories about me, I see him (her) as soon as possible to "have a talk" about it.
23. I often have a hard time saying "No."*
24. I tend to bottle up my emotions rather than make a scene.*
25. I complain about poor service in a restaurant and elsewhere.
26. When I am given a compliment, I sometimes just don't know what to say.*
27. If a couple near me in a theatre or at a lecture were conversing rather loudly, I would ask them to be quiet or to take their conversation elsewhere.

400

SPENCER A. RATHUS

TABLE 1 (Continued)

28. Anyone attempting to push ahead of me in a line is in for a good battle.
29. I am quick to express an opinion.
30. There are times when I just can't say anything.*

* Total score obtained by adding numerical responses to each item, after changing the signs of reversed items.

* Reversed item.

The schedule in the present study consists of the 30 items shown in Table 1. Some of these are based on Wolpe's (1969, p. 63) and Wolpe and Lazarus's (1966, p. 43) situations, and on items from the Allport (1928) and Guilford and Zimmerman (1956) scales. Others were suggested by diaries the author requested be kept by two classes of college juniors and seniors. In them were recorded behaviors the student would have liked to exhibit but refrained from exhibiting because of fear of aversive social consequences.

The reliability and validity and an item analysis of the resultant instrument, the Rathus Assertiveness Schedule (RAS), are discussed below

CHECK LIST for the IEC / Scientific Committee

SNO	CHECKLIST QUESTIONS	YES	NO
1	FORMAT		
	Title with complete details of principal investigator & co investigators		
	Covering letter with approval of HOD & Dean		
	Statistician approval		
	A4 double space Times new Roman font of size 12		
2	TITLE		
	Is it meaningful?		
	Does it reflect study nature & Purpose?		
	Is it inconclusive or unbiased?		
	Is the type of study stated explicitly?		
3	STUDY JUSTIFICATION		
	What this study intends / Expected to add to our knowledge?		
4	HYPOTHESIS		
	Is it clearly stated?		
	Logic of Hypothesis		
	Is it testable?		
5	AIMS & OBJECTIVES		
	Are they been stated clearly?		
	Are they coherent with title & study design?		
6	REVIEW OF LITERATURE		
	Is the deficiency of existing knowledge stated?		
7	STUDY DESIGN, VARIABLES & PARAMETERS (To be checked by statistician)		
	Is the setting defined?		
	Is the study duration clearly stated?		
	Is the study type stated clearly?		
	Are the study variables listed & defined?		
	Are the study parameters listed & defined?		
	How are the variables controlled?		
8	SAMPLE SIZE (To be checked by statistician)		
	Is it decided following statistical principles?		
	Was it calculated with power of the study?		
	Is the sample size & study power sufficient to address the hypothesis?		
9	STATISTICAL METHODS (To be checked by statistician)		
	Are statistical methods clearly stated for each type of parameters / variables?		
	Is the P value defined?		
	Have they stated the reason for accepting α or β error?		
	Is the software to be used is mentioned?		
10	FUNDING		
	Source of funding (Self/ Govt./Pharma companies etc)		
	If funded my commercial companies who owns & controls the data?		
11	ANCILLARY SERVICES		

	Are the services of ancillary department needed?		
	If yes, is the necessary permission obtained?		
	Does the contribution of ancillary services satisfy / deserve authorship criteria?		
12	DATA COLLECTION		
	Names of people involved in data collection		
	Are they pre-trained to collect data?		
	Do they receive any remuneration? (esp. for extra mural projects)		
13	REFERENCES		
	Are they >10?		
	Do they comply with Vancouver / Harvard style?		
	Is 50% of references <10 years?		
14	CONFLICTS OF INTEREST		
	Does the study involve any products manufactured distributed / sold by finding body / company		
	Has the researcher / guide / co-guide benefited by any means by the manufacturer/seller of product tested		
	Are the study subjects shared by another ongoing study if so, justification to include them in this study		
15	INTERVENTION		
	If it is an interventional study has the nature of intervention described?		
	List of potential / actual harm arising out of the intervention		
	Are the steps to be taken for reducing harmful effects mentioned?		
	Is there any compensation for adverse effects?		
16	PRODUCT USED IN THE STUDY		
	Is it already in use?		
	If yes, is the purpose same as that of the study?		
	If no, are any animal studies available?		
	How the product is differently used in the study than it is currently used in clinical setting?		
	Is the product side effects already studied?		
	Is there an advisory against the product by FDI / DCI?		
17	ETHICS		
	Does this study require ethical clearance?		
	Has the consent form in English / vernacular language included?		
	If study involves subjects <18 years of age, is child ascent form included?		
	If it means lab animals, is clearance obtained from lab veterinarian?
