

Title: Aatmanirbhar Bharat and India's path to self-reliance: Analyzing its impact on the Secondary sector of the Indian Economy.

1. Introduction: -

स्वदेशी अपनाएंगे भारत को आत्मनिर्भर बनाएंगे।

The plan, Aatmanirbhar intends to encourage and promote people to become self-reliant in almost every sector only then we will be able to fulfil our needs. In fact, dependence was never there in our culture. The vision of Self-reliant India is not new but from the classical point of view since ancient times as we have given priority to karma over luck. As Lord Krishna says in the 48th verse of the second chapter of the Bhagavat Geeta:

कर्मण्येवाधिकारस्ते मा फलेषु कदाचन। मा कर्मफलहेतुर्भूर्मा ते सङ्गोऽस्त्वकर्मणि॥

The purport of the above shloka means that Keep on performing your duties without expecting any reward in return, leading a selfless life – this is what it is all about. India as a whole, believes in karma and we are highly recognized in the world for our scriptures, ancient knowledge, wisdom, trade, natural resources and agriculture but we still need to organize ourselves in few sectors. While talking about self-reliance, we must not forget the Swadeshi movement led by Mahatma Gandhi way back in 1905, meaning thereby that the concept of aatmanirbharta is not new to us. During the Swadeshi movement, Mahatma Gandhi ji promoted khadi while also wishing for our country to become self-reliant. Despite the loss of millions of lives and a big jolt to our nation as an aftermath of partition, our country withstood all the ups and downs and we, the people of India managed to retain our cultural integrity. Science and technological development came to be seen as an important tool for economic development in Independent India.

In the words of the Buddha, “No one saves us but ourselves. No one can and no one may. We must walk the path and for any nation, self-reliance is a critical milestone.” “Atma Nirbhar Bharat Abhiyan” has taught people to believe in themselves; today people have a strong desire to spread all over the world the mantra of “Local to vocal” and in this era of Corona crisis, every countryman is bringing a smile to his face and happiness to his life by making dreams come true. Land, labour, liquidity, and law have all been taken care of — to make true the dream of India being self-reliant in every sphere of life. These economic packages are for our cottage businesses, home industries, and Ministry of Micro, Small and Medium Enterprises (MSMEs), which provides a living for millions of people. The Self-Reliant India package is for the country's workers and farmers who work hard for the countrymen in every condition and season; it is for the country's middle class, which contributes to the country's growth. It stands for the Indian Industry, which is dedicated to promote India's economic growth. Only local has rescued us in times of need, and time has taught us that we must make local our life mantra. Today, Indian medicines have proved to be life saviors.

Self-reliance does not imply that we should stop importing items from any nation; rather, it implies that we must improve our quality and branding so that people choose to buy it. India's culture and customs speak of a self-sufficient India whose essence is 'vasudhaiva kutumbakam.' Today, we have the greatest resources and talent in the world. If we have to rely on someone, we must also rely on our hidden talent, morale, and confidence because it makes the person self-reliant and opens the doors of success for the individual.

Aatmanirbhar Bharat stands for self sufficient India. Amid the economic vision of strengthening the country to withstand the global challenges. The government of India has chosen self-sufficiency as one of the vital tools. Aatmanirbhar Bharat Abhiyan was introduced to make India self dependent. The concept is to back up the economics major sector, making India more involved and an important part of the Global Economy. The initiative took flight amid the outbreak of COVID-19 to ensure the prompt availability of the necessary medical aid from within country. The concept expanded to granting enough support to various sectors to bring the Indian economy back on track. After India's most remarkable Swadeshi Movement Aatmanirbhar Bharat abhiyan is currently in the lime light. During the pandemic Prime Minister Shri Narendra Modi came up big announcement of Aatmanirbhar Bharat Abhiyan. On May 13, 2020, he announced the idea of making India "Aatmanirbhar" with an initial package was introduced as an investment towards curbing the challenges faced by India's citizens during the COVID-19 pandemic.

The mission is based on resilient, efficient and competitive policies to bring India back on its feet through self-generation and sufficiency. To make the Aatmanirbhar Bharat Abhiyan more effective India's Finance Minister announced the inauguration of several enablers and innovative government reforms. These reforms aim to intensify the seven sectors that worked under the self-sufficient mission. Some of the reforms under Aatmanirbhar Bharat Abhiyan are as follows :-

- Supply chain reforms to aid Agricultural sector.
- Reforms for simple and clear laws.
- Reforms for strong financial system.
- Reforms for Human resources and etc.

1.2 Research Questions / Objectives

- To examine the Impact of the PLI scheme to enhancing the manufacturing capabilities in India.
- To know the effect of Aatmanirbhar Bharat initiatives on MSMEs to achieving maximum manufacturing output.
- To examine the role of increased domestic manufacturing in employment generation and its socio-economic impact in India.

- To know how Aatmanirbhar Bharat has impacted manufacturing through agricultural productivity for the development of the rural economy in India.

1.3 Hypothesis of the study.

1. **H₀** : The Aatmanirbhar Bharat initiatives has not led to a significant increase in employment opportunities in the manufacturing sector.

H₁ : The Aatmanirbhar Bharat initiatives has led to a significant increase in employment opportunities in the manufacturing sector

2. **H₀** : The PLI scheme Aatmanirbhar Bharat has not significantly contributed to imports substitution in the sectors.

H₁ : The PLI scheme Aatmanirbhar Bharat has significantly contributed to imports substitution in the sectors.

3. **H₀** : There is no adverse impact of Aatmanirbhar Bharat on India's trade relations with global partners.

H₁ : There is adverse impact of Aatmanirbhar Bharat on India's trade relations with global partners

1.4 Methodology

1. Research design

This study adopts a mixed methods research design, incorporating both quantitative and qualitative approaches. The quantitative analysis examines macroeconomic indicators such as GDP growth, employment rates, trade balance and FDI inflow on secondary sector after Aatmanirbhar Bharat implementation. The qualitative analysis involves reviewing government reports policy papers and expert opinions to assess the impact of self-reliance policies on secondary sector.

2. Data sources

The studies rely on secondary data sources including.

- Government reports.
 - Ministry of Finance (Eco survey of India)
 - Reserve Bank of India (RBI annual report)
 - Niti Aayog policy documents.
 - Ministry of commerce and industry report (IBEF, DPIIT)
- News Article and industry reports.

- The Economic Times, Financial Times, Business standard.
- Reports from FICCI, CII etc.

3. Data analysis method.

- Quantitative analysis :- Analyze trends in GDP growth, employment rates and trade balance before and after Aatmanirbhar Bharat in secondary sector.
- Qualitative Analysis:- Identify key themes from policy documents.
 - Compare India's self reliance policies with those of their emerging economies(e.g. china. Made in china 2024) .
 - Study the impact of self reliance on specific industries (e.g. electronics, defense, MSMEs)

2. Literature Reviews :-

The five year plans(1951-1956). India's self reliance has been historically promoted through policies. Which emphasized domestic production however with the liberalization of the Indian economy in 1991, the focus shifted towards globalization and foreign direct investment

Kruger, M. (1997). The import substitution model, he emphasizes the role of domestic industrial development in reducing dependences on foreign imports and promoting self-sustained economic growth this research proposal aims to analyze the relevance and impact of the import substitution model in the context of developing economies with particular reference to employment generation, industrial growth, and structural transformation. The findings of the study are expected to contribute to a better understanding of the conditions under which import substitution can support sustainable development and how's its principles can be adapted to contemporary initiatives such as self -reliance oriented economic policies in developing countries.

Shettar (2017) has explained the impact of Make In India campaign as on global perspective. The study highlighted the main focused area under Make In India campaign which was the effect of FDI in Manufacturing sector of India. The study concludes that while Make In India has strong potential to promote sustainable industrial growth, its success depends on effective policy execution, continuous reforms, and integration with global value chains.

Gupta, R. (2019). Social dimension of self -reliance. A path to inclusive development journal of social policy. Self- reliance also encompasses "empowering independence through skill development education and local employment. The study conclude that sustainable self-reliance requires an integrated approach where

economic growth is supported by social development, human capital formation, and inclusive policies, ensuring balanced and resilient national development.

Dr Richa Srivatsava (2019) has studied the impact of Make In India program on national and international level. This campaign concentrated on manufacturing sector but having less impact on agriculture sector. The study concludes that while Make In India has positively influenced India's economic positioning globally, sustained reforms, technological upgradation, and skill development are essential to maximize its long term national and international impact.

Gupta, R. (2019). Social dimension of self reliance .A path to inclusive development journal of social policy. Self reliance also encompasses “empowering independence through skill development education and local employment.

Mishra, Hari Hari (2020) “Post covid 19 Atmanirbhar Bharat : Time to usher in an industrial and agricultural revolutions. The study concludes that sustainable self-reliance in the post-pandemic period requires a balanced approach involving fiscal support, technological upgradation, skill development and market – oriented reforms to ensure inclusive and resilient economic growth in India.

Kumar ,R & Sharma, P.(2021).Economic self reliance and sustainable growth. A policy perspective for emerging economies. In the context of national economies self reliance emphasizes domestic production reduce import dependency and resilience in key sector like Manufacturing.

Mishra, P.(2021).Self reliance and sustainable development. A policy analysis self reliance refers to A country capacity to fulfill its essential needs. It is a strategy aimed at long term resilience and sustainable development.

Sen Gupta & Basu (2021). The Aatmanirbhar Bharat initiative aims to balance both by fostering domestic industries while maintaining global trade relations.

Agrawal (2021) In his study he concluded that Make In India and Atmanirbhar Bharat scheme are used in the concept of local to global. Program mainly focused on two objectives that the first to boost of MSMEs and to use of local product. Second is to make less dependency of Foreign economies through import substitution policy.

Grish yadav, Amit kumar, Aditya patel, Pawan kr (2021) This study focused on 16th Atmanirbhar Bharat Abhiyan impact on agriculture and allied sectors. This study concludes that Aatmanirbhar Bharat Abhiyan has significant potential to make agriculture more resilient and self reliant, provided reforms are supported by effective execution, institutional support by effective execution, institutional support, and capacity building at the grass root level.

Mehta, R. & Kapoor, R.(2021). India's digital services exports have grown by 15%post pandemic supporting employment in IT and Fintech sectors. The study concludes that Indias digital services exports have strong potential to drive long term economic growth, provided policy support, innovation and digital infrastructure continue to be strengthened.

Kumar ,R & Sharma, P.(2021).Economic self reliance and sustainable growth. A policy perspective for emerging economies. In the context of national economies self reliance emphasizes domestic production reduce import dependency and resilience in key sector like Manufacturing.

Mishra, P.(2021).Self reliance and sustainable development. A policy analysis self reliance refers to A country capacity to fulfill its essential needs. It is a strategy aimed at long term resilience and sustainable development.

Niti Aayog(2022). The government aims to reduce India's reliance on China by promoting local chip manufacturing. This paper emphasizes that developing a domestic semi conductor ecosystem is essential for supply chains resilience under the Aatmanirbhar Bharat framework.

Gupta,R & Sharma ,P.(2022). Impact of domestic manufacturing polices on India's economic growth, the study analyzes the effect of domestic manufacturing polices under the Aatmanirbhar Bharat initiative on India's economic growth. The study concludes that domestic manufacturing policies have a positive impact on Indias economic growth, but their long term success depends on sustained reforms, innovation, skill development , and effective policy execution to ensure inclusive and sustainable growth.

Minisrtry of Defence(2022). India has shifted from being the world's largest arms mporter to increase domestic defense manufacturing. The study conclude that Indias shift towards self reliance in deence production enhances national security , boost industrial growth, and posituons Indias as a competitive player in the global defence markets.

International energy agency (2022). Investment on bio-fuels and renewable energy has reduced dependency on crude oils imports. The study concludes that sustained and targeted investment in biofuels and renewable energy are essential for achieving energy transition goals, enhancing energy self reliance, and promoting long term environmental and economic sustainability.

World Bank. (2022). Research indicates that India's investment in infrastructure has enhanced productivity and reduced logistics coast by 20%. The report conclude that sustained and well targeted infrastructure investment is a key driver of productivity enhancement and inclusive economic growth in India, supporting long term development and economic resilience.

UNCTAD.(2022). Self reliance & make in India push, FDI inflows increased by 13% in 2021-2022, indicating that India remains attractive to global.

Start up India (2022). India became the third largest start -up ecosystem, with over 100 unicorns benefiting from government incentives.

Upadhyay, M & Malik f.(2023). Societal and economic impact of Aatmanirbhar Bharat . A long term vision through education. “This paper examines the potential impact of the Aatmanirbhar Bharat initiative on societal values and economic growth, emphasizing the role of education”.

Tech Mahindra .(2023). Digital transformation super charging the Indian economy and powering an Aatmanirbhar Bharat . The economic times.” The article discussed how digital transformation is accelerating India’s economic growth and supporting the Aatmanirbhar Bharat visions.

Bhardwaz, S & Sharma, S (2024). Role of Aatmanirbhar Bharat Abhiyan in transforming the Indian economy. An explorative study. International Journal of financial management and economics.”This study explores the role and significance of the Aatmanirbhar Bharat initiative in shaping India’s development nation status by 2047”.

Sunil Bhardwaz and Soni Sharma (2024) . Role of Aatmanirbhar Bharat Abhiyan in Transforming the Indian Economy. The paper explores the Aatmanirbhar Bharat initiatives role in India’s development trajectory analyzing its potential to foster economic growth, innovations and sustainability. The study provides insights useful for policy makers, academics, and stakeholders aiming to understand the contribution of Aatmanirbhar Bharat to India’s transformational journey.

2.1 Research Gaps

- Limited studies on the actual benefits and challenges MSMEs face under the Aatmanirbhar Bharat.
- A gap in understanding how different industries (e.g. Manufacturing, defense ,agriculture and services) are adapting to self reliance goals.
- How India can balance self reliance while still being a part of global supply chains?
- Need for more research on skill development initiatives.
- The role of renewable energy and green technology in self reliance efforts.
- Effectiveness of self reliance policies in reducing agriculture dependence on Import

3. Aatmanirbhar Bharat initiative by the government of India.

Aatmanirbhar Bharat stands for self sufficient India. Amid the economic vision of strengthening the country to with stand the global challenges. The government of India has chosen self-sufficiency as one of the vital tools. Aatmanirbhar Bharat Abhiyan was introduced to make India self dependent. The concept is to back up the economics major sector, making India more involved and an important part of the Global Economy. The initiative took flight amid the outbreak of COVID-19 to ensure the prompt availability of the necessary medical aid from with-in country. The concept expanded to granting enough support to various sectors to bring the Indian economy back on track. After India's most remarkable Swadeshi Movement Aatmanirbhar Bharat abhiyan is currently in the lime light. During the pandemic Prime Minister Shri Narendra Modi came up big announcement of Aatmanirbhar Bharat Abhiyan. On May 13, 2020, he announced the idea of making India "Aatmanirbhar" with an a initial package was introduce as an investment towards curbing the challenges faced by India's citizens during the COVID-19 pandemic.

Aatmanirbhar means to promote and prioritise indigenous products and ensure that these items are competitive in terms of cost and quality. It is underlined that we create our indigenous products so that the cost of production is low and the quality is high. It was implemented in India in 1980 for our workers to get technical knowledge and enhance their managerial skills. As a result, good outcomes were obtained within only two decades. Therefore, in the coming years, the success of "Aatmanirbhar Bharat Abhiyan" will depend on the approach opted by the Indian Government. As we all know, the country was put under lockdown due to a coronavirus outbreak. During this turbulent period we learnt to be self-sufficient. People prepared food packets and distributed them to the poor and needy persons. People who had spared medicines, handed them out. The owners of the vehicles donated their vehicles. People volunteered and contributed to the cause. People who used to work in the clothindustry were motivated and began producing PPE kits, and all of this labour was only feasible due to the government's strong administrative will. The government gave swift approvals and fast-tracked things followed by a single window. When it came to the vaccination, the government advised that the sample size be determined, and three vaccines were manufactured in India, COVISHIELD, ASTRAZENECA, (Serum India Institute), and COVAXIN (Bharat Biotech). Within a year, on 15 August, 2020 from the ramparts of Red Fort, our Hon'ble Prime Minister Modi Ji assured, he also kept his promise and delivered one of the safest and effective vaccinations to the people. Now, India is almost 62% vaccinated. During the pandemic, the government also created the Aarogya Setu App, which greatly helped individuals in maintaining social distance. The price has also been fixed on RTPCR & COVID-19 Antigen Tests. In these circumstances, the country's economic position had deteriorated significantly. The government launched the Self-Reliant India programme to improve the country's economic situation. Through

the Self Reliant India campaign, many initiatives benefiting the citizens of the country were launched to improve the country's economic situation. The major goal of the self-reliant India campaign is to repair the country's economic situation so that the country's economy may return to pre-crisis levels. Therefore, our Prime Minister has launched the Self-reliant India campaign, with some of the goals being to reduce import reliance by focusing on enhancing safety compliance and quality goods to gain a global market share. The goal of this programme is also to pay and assist all employees and farmers who have suffered significant losses from the lockdown. This will benefit the poor, labourers, migrants, and others in both the organized and unorganised sectors.

4. Growth of Manufacturing sector under Aatmanirbhar Bharat.

The manufacturing industry as the name suggests deals with the manufacturing of finished new products from raw materials or essential parts. This process of transforming raw materials or unfinished products to new finished products can involve physical, chemical, or mechanical transformations. Manufacturing does not always mean the use of machines and equipment, they can be manufactured by hand also as in small scale industries of handicrafts, hand baked items, hand manufactured edibles like jam, pickle, etc. The present and future economy of the country depends on two main pillars: one is the agricultural industry and the other is the manufacturing industry. In Fact, both are dependent on each other to some extent and when they togetherly run smoothly they can develop the country as a whole. Students should be aware of these two industries to know their country better and be a responsible citizen in the future when they can play their respective role in improving the condition of the country both economically and professionally.

Manufacturing is emerging as a central pillar of India's economic growth, contributing around 16-17% of GDP and employing over 27 million workers. The sector's strength lies in the performance of key industries such as automotive, engineering, chemicals, pharmaceuticals, consumer durables, electronics, and textiles. Supported by government initiatives like Make in India and production-linked incentive (PLI) schemes, India is targeting manufacturing to account for 25% of GDP in the coming years.

Technology is playing a transformative role in reshaping the industry. Once anchored by the machine tool sector, India is now moving towards automation, digitalisation, and process-driven production. Digital transformation has spurred innovation, improved efficiency, and positioned manufacturers to remain competitive in global markets. The sector's momentum was reflected in July 2025, when the HSBC India Manufacturing PMI hit a 16-month high of 59.1, driven by the fastest increase in factory orders in nearly five years.

India is also carving a niche in specialised global value chains. It has the potential to cater to 10% of the world's wind energy demand by 2030 through its growing capacity in wind.

power component manufacturing. In electronics, domestic value addition has risen from 30% to 70% and is projected to reach 90% by FY27. Global companies like Apple are expanding local manufacturing, with smartphone export volumes rising to 22.9 million units in the first half of 2025, compared to 15 million a year earlier. With its large workforce and cost competitiveness, India is well-positioned to become a lower-cost alternative to China for advanced technology manufacturing, according to the World Bank.

The government has reinforced this growth with policy support. The National Manufacturing Policy has evolved into the new National Manufacturing Mission, announced in Union Budget 2025-26, which focuses on five key areas: ease and cost of doing business, a future-ready workforce, vibrant MSMEs, access to technology, and quality manufacturing. The mission also seeks to build clean-tech ecosystems across solar PV cells, EV batteries, electrolyzers, wind turbines, and grid-scale batteries. Alongside, a new focus product scheme has been launched to boost India's footwear and leather sector, projected to generate 22 lakh jobs, achieve turnover of Rs. 4 lakh crore (US\$ 45.7 billion), and enable exports worth over Rs. 1.1 lakh crore (US\$ 12.6 billion).

Investment trends further underline the sector's dynamism. FDI inflows into manufacturing have reached Rs. 14.3 lakh crore (US\$ 165.1 billion), a 69% increase over the past decade, with total FDI inflows crossing Rs. 33.3 lakh crore (US\$ 383.5 billion) in the last five years. Under the PLI schemes, Rs. 21,534 crore (US\$ 2.46 billion) has already been disbursed across 12 sectors, attracting investments worth Rs. 1.76 lakh crore (US\$ 20.1 billion). The government is also planning additional incentives of Rs. 18,000 crore (US\$ 2.2 billion) for six new sectors, including chemicals, shipping containers, and vaccine inputs.

Complementing this, India's digital economy is projected to account for 20% of GDP by 2029-30, growing twice as fast as the overall economy. This widespread digitalisation, coupled with manufacturing growth, will reinforce India's role in global supply chains.

A globally competitive manufacturing sector represents one of India's greatest opportunities to drive growth, employment, and exports in the coming decade. With strong policy backing, a skilled workforce, rising FDI, and a shift toward automation and clean technologies, India is making a credible bid to establish itself as a global manufacturing hub.

5. Impact of this stimulus package Aatmnirbhars Bharat on secondary sectors of Indian Economy.

The secondary sector is the part of economy that manufacturing finished goods from raw materials. Its also known as the manufacturing sector or the industrial sector.

Manufacturing is emerging as an integral pillar in the economy growth thanks to the performance of key sectors like automotive engineering, chemicals pharmaceuticals and consumer durables. The Indian manufacturing generated 16% to 25% GDP contribution to the Indian economy by 2025.

India's manufacturing sector reached a 16years high in March with the HSBC manufacturing purchasing managers index (PMI) rising to 59.1 driven by strong increase output new order and job creations across various good sectors. India has the capacity to exports goods worth US\$1 trillion by 2030 and is on the road to becoming a major global manufacturing hub.

With 17% of the Nation's GDP and over 27.3 million workers, the manufacturing sectors play a significant role in the Indian economy . Through the implementation of different programes and policies the Indian government hopes to have 25%of the economy's output come from manufacturing by 2025.

India now has the physical and digital infrastructure to raise the share of the manufacturing sector in the economy and make a realistic bid to be an a important player in global supply chains. A globally competitive manufacturing sector is India's greatest potential to drive economic growth and job creations this decade due to factors like power growth. Long term employment prospects and skill routes form millions of people.

India has significant potential to engage in international markets several factors contribute to their potential. They can take advantages of four markets opportunities: expanding exports localizing imports, internal demand and contract manufacturing. Manufacturing sector in India is gradually shifting to a more automated and process driven manufacturing which is expected to increase the efficiency and boost production of the manufacturing sector.

6. Tentative chapter of the study: -

Chapter 1: Introduction.

1.2: Objectives of the study

1.3: Hypothesis

1.4: Methodology

Chapter 2: Literature review.

Chapter 3: Aatmanirbhar Bharat initiatives govt of India.

Chapter 4: Growth of Manufacturing sector under Aatmanirbhar Bharat.

Chapter 5: Impact of Aatmanirbhar initiatives on secondary sector.

Chapter 6: Performance, Suggestion & Conclusion.
